

NuPlant in the News

A number of articles have been published about Structure Vision's flagship NuPlant™ software. The NuPlant™ technology is designed to address the needs of site licensing companies, decommissioning contractors, new build operators and reactor vendors by providing a detailed and accurate analysis of the decommissioning requirements of a complete nuclear facility. Using NuPlant™ could achieve significant cost and time savings by accurately estimating decommissioning liabilities across the complete project lifecycle, optimising Nuclear waste cutting and packing operations and reducing planning time, storage and transportation costs.

An article in [The Engineer](#) describes how Structure Visions expertise in developing software for packaging problems has been applied to Nuclear Decommissioning with the development of the NuPlant software package.

Another article in [Nuclear Energy Insider](#) discusses NuPlant and gets the viewpoints of industry experts.

Finally, an article in [Materials World](#) describes how NuPlant can fit into the overall Nuclear Decommissioning process and its applications to Nuclear New Build as well.
